

Virtual Scanstation

Software for Wicks and Wilson 7700- and 8800-Series Scanners

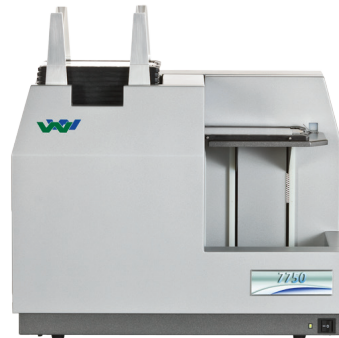

COMPLETE QUALITY ASSURANCE. MINIMUM EFFORT.

Designed exclusively for the [Wicks and Wilson](#) production microfilm and microfiche scanners, [Virtual Scanstation](#) (VSS) is an offline quality assurance (QA) software tool that enables 100% inspection of every image frame, including adjustments and reprocessing, to be performed without interrupting the scanning process or capture throughput.

By separating the capture process from the QA routine, VSS optimizes the creation of digital images from microfilm and microfiche. Flexible enough to integrate with existing workflows, VSS provides a powerful toolkit that allows every image scanned to be checked and adjusted before outputting a final saved image. The VSS solution enables the speed of the scanner to be maximized at all times, while the throughput of the QA process is adjusted quickly and easily according to demand.

8800-Series Microfilm Scanner

7700-Series Microfiche Scanner

“Virtual Scanstation is enormously beneficial. By taking QA tasks offline, we’ve improved our workflow and are able to accomplish projects on a tight deadline.”

~ Michael Bailey, UK Service Bureau Owner and Director

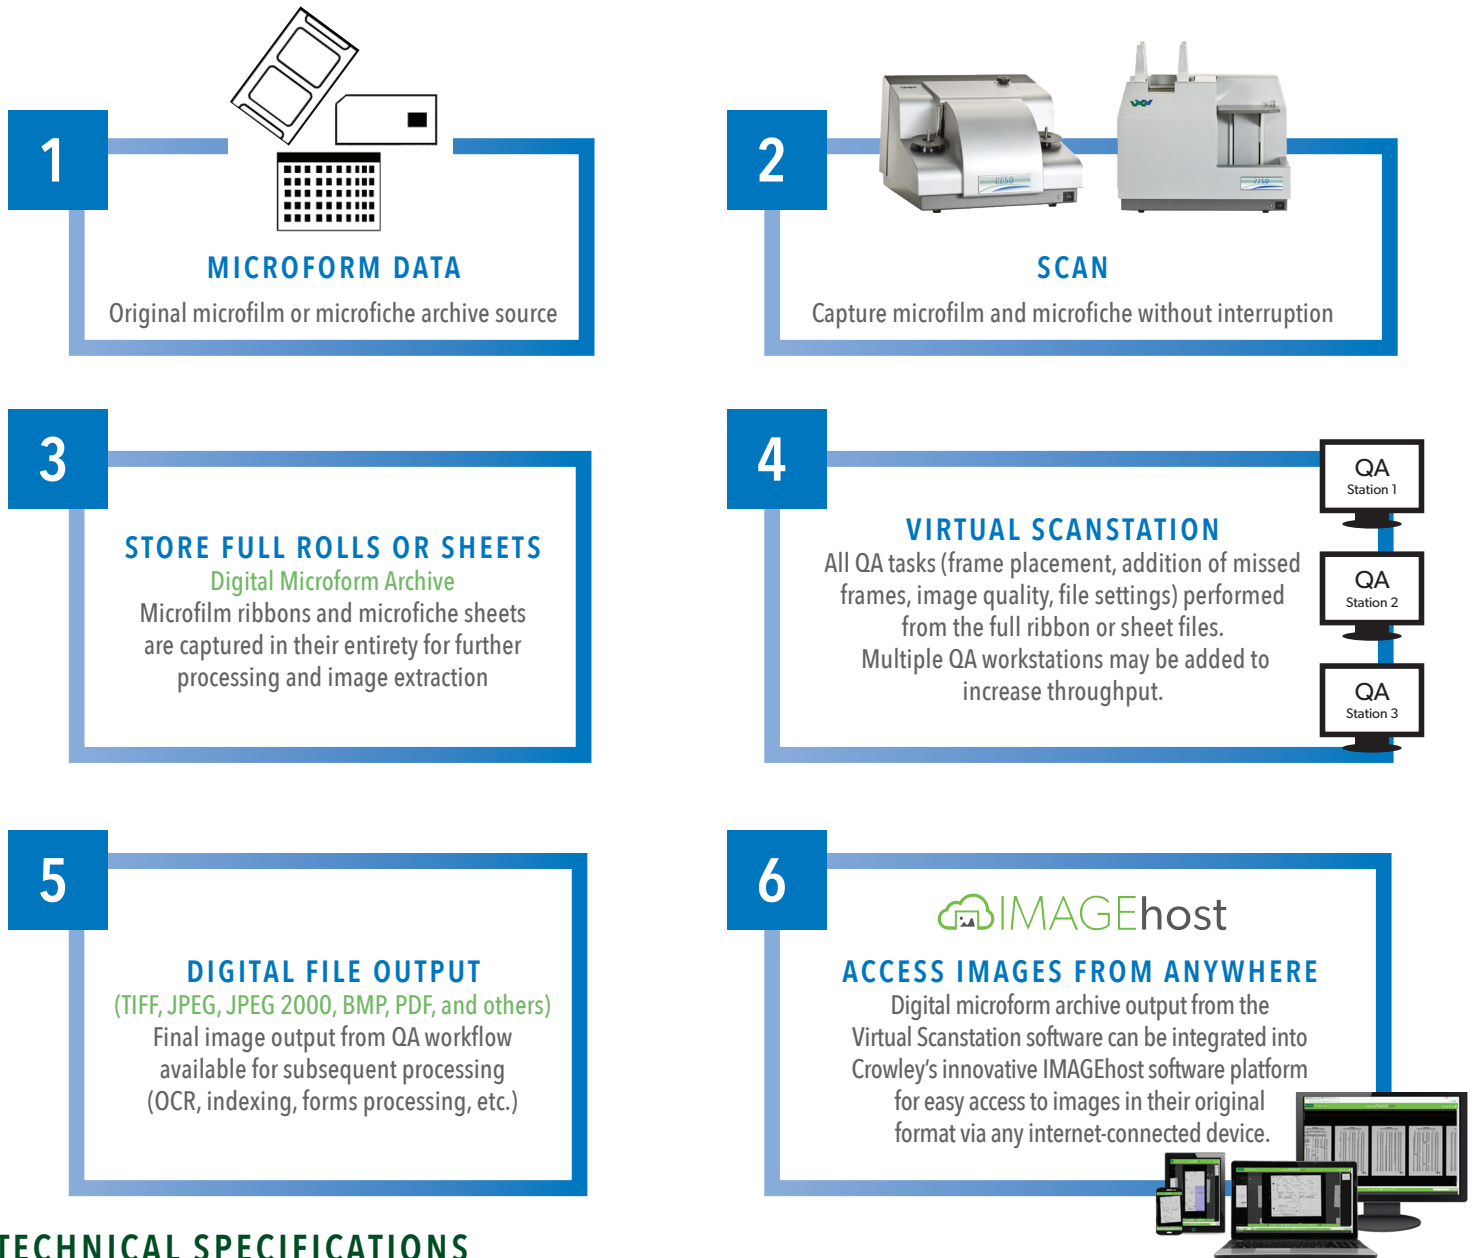

KEY FEATURES

- Enables 100% QA inspection of every frame
- Virtual rescan feature enables post-scan image reprocessing and adjustments without reloading the media
- Enhances operator productivity and streamlines workflow
- Offline operation allows QA to be performed without impacting throughput
- Captures a digital archive of the entire microfilm or microfiche – never miss an image
- Framing tool allows missing pages to be inserted seamlessly
- Easily integrates with existing workflow software
- Compatible with [iMAGEhost](#)

100% QUALITY ASSURANCE

THE VIRTUAL SCANSTATION PROCESS

Need to improve an image from a microfiche sheet or roll of film that has already been scanned? Need to check that every image has been saved correctly from the original source? Need to improve the productivity of your microfilm or microfiche scanner? Virtual Scanstation is the solution to all the above and more.

TECHNICAL SPECIFICATIONS

Technical Specifications	Windows 10 Pro (64-bit only with Intel Processor)
Graphics Card	High-performance NVIDIA® graphics card required Visit www.thecrowleycompany.com for more info on graphics cards and PC specs
Compatible Scanners	Wicks and Wilson 7700- and 8800-Series Scanners
